Are they doing this to match the esat project?

I noticed this email in ERT Support. Not sure if adding these custom fields is a good idea or necessary:

New Fields?

AnalysisGroup: The LabResults table already has an Analysis Field (i.e. VOCs)

Analytle\_FinalName: The LabResults table already has an Analyte field

Result\_Text: The LabResults table already has a numeric Result field. Qualifiers and ND are stored in other text fields. A numeric Result field allows for basic numeric reporting, sorting, etc..

I noticed R8 has started loading analytical data without adding any custom fields. Maybe R6 should check with them on EDDs and how to map in lab data?

Thanks,

Frank

**Subject:** GOLD KING: SCRIBE adding the revised fields, Field Description file has highlighted rows

Scribe Fields	Description	Data Type	Field Size	Primary Key	Required
AnalysisGroup	Lab Analysis ( i.e VOCs) (Reported) Analyte/Paramater name (i.e. Lead; Arsenic; etc.)	Text	50	No	No
Analyte_FinalName	(As needed to appear on Report) makes consistent the spaces and dashes of analyte names	Text	60	No	No
Result_text	Result (text and unit separated by " " pipe) returned from lab	Text	50	No	No

The AnalysisGroup and Analyted\_Final\_Name will be used for reporting. And the RESULT\_Text will record the original results so conversions can be tracked. We will need these fields to be part of the final combined file
